LETTER

Dear Sir:

In the Examiner's Advisory Action mailed January 29, 2002, the Examiner states that Applezweig clearly states that the envelopes 11 are formed of a transparent frangible material and nothing in the disclosure prevents one from applying pressure on the cover of the envelope to puncture therethrough. In addition, the Examiner states that Applezweig uses the same type of material as applicant. Also, the Examiner states that Applezweig, on column 9, lines 34-36, even utilizes a film of foil packaging which is commonly known in the packaging art as easily frangible by application of pressure on the cover thereof. However, applicant respectfully points out that Applezweig's envelopes are formed of two bands of heat-sealable material, see column 4, lines 8-10.

EXPRESS MAIL CERTIFICATION UNDER 37 CFR 1.10

Both of these bands are of the same frangible material. Applicant's envelopes, by contrast, are formed by a flexible base and a cover layer, or, in the alternative, a base film and a cover film. Applicant discloses a flexible base layer made of polyamide/polyethylene and a flexible covering layer made of sterilization kraft paper, see page 3, lines 20-22. Applicant's base layer is thicker than its covering layer which is distinct from Applezweig where the two layers are the same. As the covering layer is thinner, it can be torn though by a person desiring to remove the contents of the package. Since the base layer is thicker, it will not break or tear when the covering layer is torn. This is in contrast to Applezweig, wherein the contents of the envelopes are generally removed by breaking both layers, that is, by tearing both the top and bottom layer forcing the contents out. Thus, applicant submits that its invention is patentably distinct from Applezweig.

No new matter has been added in the amendment previously filed on January 18, 2002. Accordingly, prosecution on the merits hereof is respectfully requested.

Respectfully submitted,

By:
